

Demo Field

Laying down the field and packing it should be done carefully! The sheet below explains and can be found on the field-flight cases.

Procedure:

1. Start with the full tiles from **FlightCase1** in the upper right corner!
2. Then start in the upper right corner of the **FlightCase2**-part; rows are placed from right to left.
3. Continue with **FlightCase3** and **FlightCase4**.
4. Lay down the leftmost part of the field with the half tiles from **FlightCase1**.

Notes:

- When placing tiles; take 3 tiles and start with top one. When packing the field; reverse order and make stacks of 3 tiles preserving order as explained before.
- The tiles can be clicked together using the special tool mounted under **FlightCase1**: move the brown wheel down and add weight to the flight case.
- The borders should be stored in **FlightCase1**, the (border) corners only fit diagonally.
