# How to add the Robotics01 printer in Ubuntu – 12.04 LTS

*\*\*As taken from the Amigo Wiki ;)\*\**

Installing for Ubuntu 12.04 LTS
1) Open a non-root terminal and enter: system-config-printer
2) Click Add
3) Network Printer
       LPD / LPR Host or Printer
       Host: wbmtprint.wtb.tue.nl
       Queue: Robotics01
4) Click Forward
5) Provide PPD file: The required PPD file is located in the Manuals folder on the svn
6) Provide details:
       Name: Robotics01
       Description: Robotics01
       Location: Robotics Lab
7) Apply everything and you could print a test page if you want

**\*\*NOTE\*\***
Apparently sometimes clicking "Network Printer" does not show a list with options such as "LPD/LPR". This probably has to do with a graphical bug. Rebooting Ubuntu resolves this problem.
